Background

One of the critical issues that the City of Hallandale beach faces is drainage. To minimize the flooding nuisance along NW 8th Avenue, the City will be performing a Drainage Improvement Project. In addition, it will include pavement restoration and markings, regrading and sodding of swales as necessary, sidewalk replacement, and new ADA compliant ramps. This project will also upgrade physical/aesthetic appearance that will complement housing developments and rehabilitation as well as promote more attractive neighborhoods.

Scope of Work

The improvements under this contract consist of site and civil work associated with the construction of four (4) new drainage structures and French drains. Once the new drainage structures are installed the City will mill and resurface portions of the roadway within the project limits. All work under this contract is within the City's right-of-way. The project improvements will be at the following location:

- NW 8th Avenue from NW 9th Street to Pembroke Road

Project Limits/Proposed Locations
