Project Update Report

Background

According to Florida Statute, all ocean outfalls must close by 2025. To assist with this, as well as meet the City's Sustainability Action Plan goal to reduce its portable water consumption, the City has already executed phase I of water re-use. This project, phase II would expand the already successful water re-use program.

Scope of Work

The scope of work for this project includes, but is not limited to the design, permitting and bidding of plans for approximately 4,500 linear feet of new 8 inch reuse irrigation water pipeline from the existing phase I pump station to the proposed medians within the Three Islands Boulevard neighborhood. Reuse water pipeline construction limits include a portion of Three Islands Boulevard (median just south of Atlantic Shores Boulevard to median just south of Parkview Drive intersection), and the entire lengths of Parkview Drive and Leslie Drive roadways.

Progress Report as of October 31, 2020

Calvin Giordano and Associates, Inc. completed 60% design plans on July 23, 2020. 90% design plans pending.
